

# Safend Discoverer: Data... classified, found and secured

If they've got it, the Discoverer will find it

Protecting your sensitive information from within, the Safend Discoverer lets you know who has what. Built to provide strong rules-based data classification, the Discoverer silently scans your company endpoints with minimal disruption to daily activities. Having strong alerting and reporting capabilities, the Discoverer uses keywords and pattern recognition technologies to identify and notify on inappropriate data presence. Part of the Safend Data Protection Suite, the Discoverer provides the knowledge and insight for security personnel to introduce current and strong data security policies to protect sensitive company information.

## Safend DPS, the Data Protection Suite

One DPS suite, one DPS agent

## Discoverer: Data may rest, Discoverer won't

### Forgot you had it? Discoverer remembers

- Data classification based on keywords and pattern recognition of text and metadata, mathematical and logical verifiers, file types and data fingerprinting
- Mapping and locating classified data saved on organization endpoints and alerting on their presence
- Ability to create and implement companywide security procedures and policies based on insight from detailed reports and logs on classified data
- Preconfigured security policies addressing specific regulatory compliance standards, such as PCI, HIPAA and European privacy legislation
