Avast® Business Antivirus Pro

The fastest protection powered by the world's
largest threat detection network

THE BIG BENEFITS

Protecting critical business and customer data against the latest threats while you stay focused on your business.

Machine-learning protection

Threats are constantly evolving and thanks to Avast's machine-learning technology and the world's largest threat detection network our protection is constantly evolving, detecting new threats quickly, and keeping you safe.

Clean and safe inbox

Our antispam service is constantly running to keep your inbox clean with real-time updates provided through the world's largest sensor network.

Secure servers

Protect your Sharepoint and Exchange servers to make sure malicious files don't get through or shared.

Permanently delete files

Deleted files can often be recovered. Permanently delete files and keep your data private.

Keep third-party software updated

We'll keep an eye on common third-party applications and keep them updated to ensure you are protected.

PROTECTION

Today's threats are ever-changing. Your protection needs to be both broad in coverage and deep in capability. Only Avast has the advantage of a threat detection network powered by 400 million endpoints.

ANTIVIRUS

Avast antivirus combines four real-time shields; File Shield, Web Shield, Email Shield and Behavioral Shield to offer comprehensive protection against today's threats.

• FILE SHIELD

Stops threats and keep your business moving. File Shield quickly scans files that are launched on a PC to ensure they're free of malware.

• WEB SHIELD

Web Shield scans both HTTP and HTTPS sites for malware and other dangers, even verifying website certificates, without disrupting your browsing experience.

• EMAIL SHIELD

Free your workforce to surf, search and email with confidence. Email Shield scans emails in your inbox to ensure they're free of malware.

• BEHAVIOR SHIELD

Provides real-time monitoring of all programs currently running on your PC. If it notices a behavior out of the ordinary (e.g. a PDF trying to access a web link) it blocks the action and reports the behavior to you.

FIREWALL

Better outbound protection and configurability compared to Windows Firewall. It silently monitors all traffic using crowd-sourced data from our 400 million global users to keep you safe.

ANTISPAM

Phishing and other threats rely on email as the primary attack method. Antispam keeps all the spam and suspicious emails out of your inbox. You can even adjust how tightly antispam controls the flow of emails to your inbox.

SMARTSCAN

SmartScan combines scans for viruses, software updates, network problems, new features and performance issues into a single click.

Once completed, it shows the itemized results and, if there are any issues, offers tools and suggestions to fix them.

SANDBOX

When you're not sure about a given file or application, run it safely in a virtual space isolated from the rest of your PC. Now there's no risk of stolen data or corrupted software. Easily run individual files with just a click, and continue to run them for as long as you see fit. Any changes made by the executable are not saved once the Sandbox is closed.

WIFI INSPECTOR

This new feature scans networks for vulnerable devices and compromising services then allows you to address any security issues reported by providing step-by-step remediation instructions.

REAL SITE

Malware can redirect you away from your intended destination, such as your bank's website, to a fake site that looks just like the real thing.

Real Site stops malware in its tracks by encrypting the traffic between an Avast-protected device and our DNS server.

You can relax knowing that you will always go to the right destination, every time.

RESCUE DISC

Helps you to create a bootable version of your Avast installation. If your PC becomes infected, you can clean, reboot, and restore functionality.

CYBERCAPTURE

Avast's proprietary, cloud-based CyberCapture identifies, isolates and determine, whether unknown files are harmful - analyzing results in real-time. CyberCapture isolates unknown files safely in the cloud for a deeper level of analysis and automatically establishes a two-way communication channel with Avast Threat Labs to speed detection.

CyberCapture analyzes over

10,000 new files every day to protect you against the latest threats.

AVAST ONLINE SECURITY

Avast Online Security features a number of browser plug-ins. The Do Not Track feature identifies tracking software allowing you to enable, disable or create a selectively private online browsing experience.

Each of our browser plug-ins also include an antiphishing feature that blocks webpages from loading if Avast detects malicious sites. The SiteCorrect function corrects typos in URLs to prevent you from accidentally going to websites you didn't intend to visit.

SAFEZONE BROWSER

SafeZone browser is a secure browser with built-in safety features to protect your privacy, prevent hacker attacks, block ads and deliver a better browsing experience. A separate Bank mode isolates the browser session and protects against keystroke logging, network eavesdropping, password capture and your personal data.

DATA PROTECTION

SOFTWARE UPDATER

Out-of-date software and applications represent serious vulnerabilities to a PC and the network. Software Updater lists all the out-of-date programs and applications on the device and allows you to update them with a single click.

DATA SHREDDER

Even deleting a file doesn't remove it for good. Data Shredder encrypts deleted data so even if it's recovered, no one can extract anything from your files.

EXCHANGE PROTECTION

Scans all emails and filters out malicious emails before they get to you.

SHAREPOINT PROTECTION

Scans files before they are uploaded on to the Sharepoint server to ensure that only the "clean" files will be let in.

AVAST BUSINESS ENDPOINT PROTECTION SOLUTIONS

Avast Business provides three tiers of endpoint protection for small and medium-sized businesses.

Avast Business Antivirus is a full-featured antivirus solution.

Avast Business Antivirus Pro includes all the capabilities of the Antivirus solution plus additional data protection capabilities.

Avast Business Antivirus Pro Plus includes all the capabilities of the Antivirus solution plus additional data protection and identity protection capabilities.

All three solutions may be used standalone or centrally managed by an on-premise or cloud-based management console. Both consoles offer deployment, management and reporting.

SYSTEM REQUIREMENTS

MINIMUM:

Memory: 256 MB of RAM | Processor: Intel Pentium 4 / AMD Athlon 64 | Free hard disk space (for installation): 2Gb

RECOMMENDED:

Minimum screen resolution: Not less than 800x600 pixels

ABOUT AVAST BUSINESS

The Avast Business Endpoint Protection solutions secure, simplify and optimize the IT experience for small and medium-sized businesses worldwide. As a business unit of Avast Software, channel partners and their end customers gain the confidence of working with a company that is uniquely positioned in the security and managed services market.

Serving over 400 million people and businesses, each device Avast protects and secures acts as a sensor, providing us unparalleled insight into what is happening real-time in our users' world through their connected technologies. Our threat detection network is among the most advanced in the world, using machine learning and artificial intelligence technologies to detect and stop threats in real time. This gives us unprecedented insight into the lifecycle of cybersecurity attacks, malware, phishing, ransomware and data breaches to deliver the

most comprehensive protection against cybercrime to date while delivering products that are easy to purchase, onboard and implement with high-performance.

Avast Business Endpoint Protection solutions may be managed from the cloud or from an on-premise solution and includes a security remote monitoring and management platform which helps SMBs secure their network.

Avast Business is dedicated to the channel and has a comprehensive partner program in place to support partners with tools and knowledge to successfully position and sell the Avast Business products, effectively secure SMBs, and enable profitable channel growth. Partners can access cloud and hosted services for their end customers. On-premise business security solutions can also be purchased online directly by SMBs.
